Manual Testing Gem Explorers

Test 1

User story: As a site user I can read the homepage so that I understand the site purpose from the first page

Acceptance Criteria:

The homepage must have text that is relative to the site's purpose

The homepage should display a hero image that is relative to the site purpose

The homepage will display the blog posts ready for the user to view right away

Steps: Load the site or go to the homepage

Expected Outcome: Confirm that once the page has loaded, the user is greeted with a visually appealing image that is relevant to the purpose of the site. Within the image should be text, giving the user an understanding of the site from the very first thing they see. The homepage should also include the site's blog posts, ready for the user to get straight into the information.

Result: PASS

Sprint Number: 7

Test 2

User story: As a site user I can use the navigation bar so that I can navigate to different pages on the site

Acceptance Criteria:

The navigation bar must be clearly visible at the top of all pages

The navigation bar will reduce to a "hamburger menu" on smaller screens

The navigation bar will adjust depending on the status of signed in

Steps: Open any page on the site, navigation will be at thde top.

Expected Outcome: Clearly visible navigation bar that displays at the top of all pages. When the user is viewing on a smaller device, the navigation will become a "hamburger menu". If the user is signed in, the navigation bar will change to give the user more access and personalisation.

Result: PASS

Sprint Number: 5

Test 3

User story: As a site user I can register an account so that I can make bookings, comment on blog posts and like/unlike blog posts

Acceptance Criteria:

The registration page must display a simply form requesting username, password and email address.

The registration page should be accessible from the navigation bar

Steps: Navigate to the homepage/any page, go to the top right hand corner and click "Sign up"

Expected Outcome: A clickable sign up button is in the navigation bar at the top of the page. When the Sign Up button is clicked, the user should be redirected to a form asking for a username, password, and email address.

Result: PASS

Sprint Number: 4

Test 4

User story: As a site user I can sign in to my account so that I can proceed with making bookings, commenting and liking/unlike blog posts

Acceptance Criteria:

The sign in option must be accessible from the navigation bar

The sign in form must validate if the username and password matches a account registered on the database

The site must have limited access until signed in

Steps: Navigate to the homepage/any page, go to the top right hand corner and click "Sign in"

Expected Outcome: A clickable sign in button is at the top of all pages. The form

must work and validate the username and password to match what is in the database. Before sign in the site will be limited, but once signed in, the user will have full access.

Result: PASS

Sprint Number: 4

Test 5

User story: As a site user I can sign out so that my information can remain private

Acceptance Criteria:

When signed out all access must be put back to limited

When signed out the username will no longer be displayed

Sign out option must be accessible from the navigation bar while signed in

A "Are you sure you want to sign out?" prompt will appear

Steps: Navigate to the top of the page and click "sign out" in the top right corner. Once clicked, a are sure modal will pop up for confirmation.

Expected Outcome: A clickable sign out button at the top of the page will then double check that you do want to sign out. After sign out, the username will no longer be on the top right hand side of the page. Once sign out is complete, the page will go back to limited access.

Result: PASS

Sprint Number: 4

Test 6

User story: As a site user I can see pop ups so that I know if the request has been successful

Acceptance Criteria:

Once signed in successfully the user will see a temporary pop up confirming their username has signed in

When a comment is submitted the user will see a temporary pop up confirming the

comment is awaiting approval

Once signed out the user will see a temporary pop up confirming they are signed out

Steps: Navigate to the sign in form and sign in, go to a blog post and make a comment, go to the sign out button and sign out.

Expected Outcome: Once the user submits their sign in information correctly, they will see a signed in pop up with their username below the navigation bar. This will remain for 4 seconds, then be automatically dismissed. The sign out pop up will advise the user they have signed out and will remain for 4 seconds, then automatically dismiss them. The comment pop up will let the user know at the top of the screen that they have made a comment and it is waiting for approval. This will automatically disappear after 4 seconds. There will also be a pop up where the comment box was, as a backup confirmation.

Result: PASS

Sprint Number: 5

Test 7

User story: As a site user/admin I can like/unlike a blog post so that I can see what posts are popular to decide what one to read/get a understanding at what type of posts get the most attention

Acceptance Criteria:

To like/unlike a blog post the user must be registered and signed in

The number of likes should be visible to everyone on the site

Steps: Sign in then Navigate to the blog posts and click the "thumbs up" icon.

Expected Outcome: Clicking the "thumbs up" icon will add 1 to the number of likes within the database, this will then display on the site for all users to see. The user must be signed in to like a post.

Result: PASS

Sprint Number: 3

Test 8
